

Tuesday, 20 May 2014

Dear Geoff

Endodontic treatment on your patient Mr. Laurie STEVENS was initiated for pain relief and investigation of cracked tooth.

Tooth: # 36  
Date of Completion: 20/05/2014  
Prognosis: Hopeless  
Recall:  
Restorative Recommendations: Extraction.

Notes: The tooth had deep fracture that entered the distal canal . The canals were partially instrumented prior to medicating and closing with Cavit and GIC. The occlusion was reduced.

Unfortunately the tooth is not restorable and extraction was recommended  
We discussed a possible referral for dental implant .  
Would you please make arrangements with Laurie to arrange extraction or referral as you and he prefers.  
Thank you for referring Laurie
