To whom it may concern:

Ref: Robert Standfast
DOB: 05/03/48

Robert presents with a loose crown on tooth 14, He had crowns done internationally 18 months ago. After assessing the the tooth (14) on a radiograph we found that the core build up aswell as the crown has been compromised . The tooth (14) also has peri apical pathology. I have suggested he sees a private dentist as will likley need a redo of the exposed RCT and a possible post and core crown if the tooth (14) is still salvagable. The only treatment option we could provide him with is removal of the tooth as we are a government funded clinic. Thank you for taking the time to see Robert today If you need any more information feel free to give me a call.

Kind regards

Dr Hybre Nel
